

JqmSamp Program

Date: 02 Oct 2017

The JqmSamp PLB program was written to test and use advanced PLB operations to demonstrate the PL/B JQuery Mobile Support. Using a client browser or a Sunbelt 'plbwebcli' App, enter the URL using 'jqmsamp.plm' so it can be executed using the jQuery Mobile mode.

While the jQuery Mobile support is meant to target various sized small mobile devices, the 'JqmSamp' program can be executed using a normal desktop client browser. The following images give a preview when executing 'JqmSamp'.
